

To Whom It May Concern,

I am pleased to recommend Dhruv Toprani, who interned with our Software Technical Program Management organization at Whisker. As a Software Delivery and Engineering Operations Executive overseeing our Software TPM team, I had the opportunity to work with Dhruv and see firsthand his ability to learn quickly, take ownership, and deliver meaningful results.

Dhruv quickly became a trusted contributor to our TPM organization and exceeded what I would typically expect from an intern. Working closely with Software Engineering and Program Management, he progressed from learning our software delivery practices and participating in Agile ceremonies to taking on greater ownership across ceremony facilitation, feature and workstream tracking, cross-team communication, and process improvement. He demonstrated an ability to step into TPM responsibilities with increasing independence while effectively navigating both technical details and cross-functional dependencies.

Beyond day-to-day execution, Dhruv improved how the TPM organization operates. He helped strengthen our TPM onboarding experience, created workflow automations, and improved the organization and accessibility of engineering and program information. His ability to understand not just what needed to be done, but why it mattered—and then independently look for ways to make the process better—distinguished him throughout the internship.

Dhruv also applied those skills outside the TPM organization through his work with our Go-to-Market team. He developed an end-to-end automation between Google Docs and Plytix that reduced a product information workflow from at least three hours of manual work to under a minute, while significantly reducing the potential for human error. The solution continues to provide value beyond his internship.

Dhruv is curious, proactive, receptive to feedback, and someone we could trust with meaningful responsibility. I strongly recommend him for future opportunities in technical program management, product management, engineering operations, or other roles at the intersection of technology and execution. I am confident he will bring the same ownership, initiative, and drive to his next opportunity.

Sincerely,
Courtney Reese
Software Delivery and Engineering Operations Executive
Whisker
